

10/126,130, filed April 19, 2002, which is a continuation-in-part of U.S. Application
Serial No. 09/912,815, filed July 24, 2001.--

In the Claims:

Please cancel claims 1-26 without prejudice to any future patent application covering
any similar subject matter. Please add claims 27-46 as follows:

27. (new) A support structure for a speaker, comprising:

2 a first elongate member and a second elongate member, wherein the first
elongate member is substantially perpendicular to the second elongate member; and

4 the speaker coupled to a first end of the first elongate member and the second
elongate member adapted to pivotally couple to a base structure, wherein the speaker is
6 rotatable about a longitudinal axis of the second elongate member.

28. (new) The support structure of claim 27, further comprising a third elongate member
2 coupled to the first elongate member, wherein the third elongate member is substantially
parallel to the second elongate member.

29. (new) The support structure of claim 27, further comprising a housing unit adapted to
2 couple to the base structure, wherein the housing unit comprises a plurality of apertures
corresponding to the first elongate member, second elongate member, and the speaker.

30. (new) The support structure of claim 27 wherein the first elongate member is a
2 telescoping.

31. (new) The support structure of claim 27 wherein the speaker is pivotally coupled to the
2 first end of the first elongate member.

32. (new) The support structure of claim 27 wherein the speaker is rotatably coupled to the
2 first end of the first elongate member.

33. (new) A support structure for a speaker, comprising:

2 a generally U-shaped member comprising a first member, a second member,
and a third member, wherein the first member is coupled to a first end of a second member
4 and the third member is coupled to a second end of the second member;

a first speaker is coupled to a first end of the first member;

6 a second speaker is coupled to a first end of the third member; and

the second member is adapted to pivotally couple to a base structure, wherein
8 the first and second speakers are rotatable about a longitudinal axis of the second member.

34. (new) The support structure of claim 33, further comprising a fourth member spanning
2 between the first member and the second member.

35. (new) The support structure of claim 34 further comprising a table coupled to the
2 fourth member.

36. (new) The support structure of claim 33 further comprising a housing unit adapted to
2 couple with the base structure, wherein the housing unit comprises a plurality of apertures
adapted to house the support structure and the first and second speakers.

37. (new) The support structure of claim 33 wherein the first member is telescoping.

38. (new) The support structure of claim 37 wherein the third member is telescoping.

39. (new) The support structure of claim 33 wherein the first speaker is pivotally coupled
2 to the first end of the first member.

40. (new) The support structure of claim 39 wherein the second speaker is pivotally
2 coupled to the first end of the third member.

41. (new) The support structure of claim 33 wherein the first speaker is rotatably coupled
2 to the first end of the first member.

42. (new) The support structure of claim 41 wherein the second speaker is rotatably
2 coupled to the first end of the third member.

43. A support structure for one or more speakers, comprising:

2 a generally U-shaped member having a first portion, a second portion, and a
third portion spanning between the first portion and the second portion, wherein the second
4 portion is adapted to pivotally couple to a base structure;

at least one speaker coupled to at least one end of the generally U-shaped
6 member; and

an elongate member spanning between the first portion and second portion of
8 the generally U-shaped member.

44. The support structure of claim 43 further comprising a table coupled to the elongate
2 member.

45. The support structure of claim 44 wherein the first portion and the second portion of
2 the generally U-shaped member are telescoping.

46. The support structure of claim 45 wherein the at least one speaker is rotatably and
2 pivotally coupled to at least one end of the generally U-shaped member.
